

## ACKNOWLEDGMENTS

This report of the 2004 Montana Behavioral Risk Factor Surveillance System (BRFSS) survey results was prepared by the BRFSS staff within the Public Health and Safety Division of the Montana Department of Health and Human Services (DPHHS). Telephone interviews were conducted by Macro International of Burlington, Vermont.

The Centers for Disease Control and Prevention (CDC), Behavioral Surveillance Branch provided financial and technical support for developing the questionnaires, implementing the survey, and processing and weighting the data. CDC's financial support has greatly facilitated DPHHS's ability to conduct surveillance of health risk factors for preventable diseases and injuries.

Special appreciation is extended to the Macro International telephone interview team and staff. Their dedication has consistently yielded high quality survey data for the Montana BRFSS.

To the citizens of the state of Montana, we thank you for your continued cooperation and willingness to participate in this very important health survey. The information you have provided regarding health risk behaviors is invaluable for assessing state trends for public health planning purposes and allowing us the ability to compare Montana's progress to the rest of the states and the nation.
